

What should I do if my Cholesterol level is high?

- Change of lifestyle
 - Exercise at least 30 minutes per session, 3 times a week
 - Maintain a healthy body weight
- Cut down on foods high in saturated fat and cholesterol
 - Choose lean cuts of meat and cut off visible fat
 - Use less butter, margarine, mayonnaise and cream when cooking
 - Choose whole grain bread and cereals
- Quit smoking as smoking lower levels of HDL (good) cholesterol which may increase your risk of heart disease

Kidney disease is a silent killer! Signs and symptoms occur late in kidney disease. Screening tests are vital, especially if you are at high risk.

The progression of kidney disease can be slowed or stopped if detected earlier.

Cholesterol Control

National Kidney Foundation of Malaysia

What is Cholesterol?

- Cholesterol is a fat-like, waxy substance, made by the liver to protect nerves, producing cell membranes and certain hormones.
- However, excess cholesterol can deposit in the arteries and form plaque which eventually leads to coronary artery disease.
- Most of the cholesterol is made by the body and some cholesterol comes from foods such as eggs, meats and dairy products.
- Types of cholesterol
 - Low Density Lipoprotein (LDL) (usually known as bad cholesterol)
 - High Density Lipoprotein (HDL) (usually known as good cholesterol)
 - Triglycerides are a form of fat mainly obtained from our daily diet)

What should my Cholesterol level be?

| Cholesterol | Desirable level |
|-------------------|------------------------|
| Total Cholesterol | Less than 5.17 mmol/L |
| HDL | More than 1.03 mmol/L |
| LDL | Less than 3.36 mmol/L* |
| Triglycerides | Less than 1.71 mmol/L |

Reference: American Heart Association

* Your doctor may set other targets for you if you have heart disease or diabetes.
